DETAILED ACTION

Double Patenting

- 1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).
- A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).
- 3. Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).
- 4. Claims 10-13 and 15-18 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 6, and 7 of U.S. Patent No. 6,628,226 to Suzuki et al. (hereinafter "'226 patent"). Although the conflicting claims are not identical, they are not patentably distinct from each other because all of the limitations of claims 10-13 and 15-18 are present in claims 1, 6, and 7 of the '226 patent (see below).

Claims 10 and 15 are anticipated by claim 1 of the '226 patent. The '226 patent claims a vehicle onboard radar system (see column 9, line 6) comprising: a receiving and transmitting unit for receiving and transmitting a radio wave signal (see column 9, lines 10-11); a signal processing unit for processing said radio wave signal (see column 9, lines 13-14); and outer housing which is insulative, installs said signal processing unit therein, and has a conductive shielding layer inside thereof (see column 9, lines 16-17

Application/Control Number: 10/614,180

Art Unit: 3662

and 22-24); an electrically conductive member which holds said receiving and transmitting unit, is arranged so as to block up an opening of said outer housing, and is connected to said conductive shielding layer (see column 9, lines 18-21); wherein said receiving and transmitting unit and said signal processing unit are electrically grounded to one of said conductive shielding layer and said electrically conductive member (see column 9, lines 25-28).

Claims 11 and 16 are anticipated by claim 6 of the '226 patent.

Claims 12 and 17 are anticipated by claim 7 of the '226 patent.

Claims 13 and 18 are anticipated by claim 1 of the '226 patent (see column 9, lines 16-17 and 22-24).

Allowable Subject Matter

5. Claim 14 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The cited prior art disclose multiple housings for onboard vehicle radar systems. Additionally, Chen (5,512,901) teaches the use of stacked circuit boards. Application/Control Number: 10/614,180
